Weekly Coal Production

Energy Information Administration
Washington, D C

Production for Week Ended:
August 2, 1986

Highlights

U.S. coal production in the week ended August 2, 1986, as estimated by the Energy Information Administration, totaled 17.13 million short tons (bituminous coal and lignite, 17.06 million short tons; Pennsylvania anthracite, .08 million short tons). This was 0.8 percent higher than in the previous week and was 5.3 percent lower than production in the corresponding week of 1985.

Cumulative U.S. coal production from January 1 through August 2, 1986, was estimated at 518.55 million short tons, 0.2 percent below the 519.83

million short tons produced in the comparable period in 1985.

The methodology used to make weekly estimates of coal production was last published in the Weekly Coal Production (DOE/EIA-0218(84/40)), released for publication on October 15, 1984.

NOTE: Coal production for the State of New Mexico was down for the weeks ended July 19 and July 26 due to miners' vacation.
